

Octagonal Vase

by Alan McLeod

Octagonal Vase - Test Version

Note that this vase uses some experimental techniques - I have not yet built it from real pieces. I suspect it will be sturdy enough for at least several stems of flowers but will probably require a light hand when moving.

The bottom of the vase cannot be perfectly centred as the width of the octagon is not an exact number of studs.

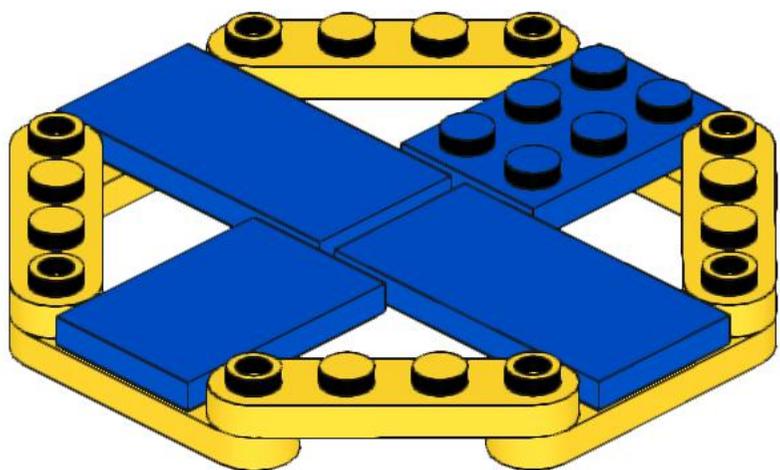

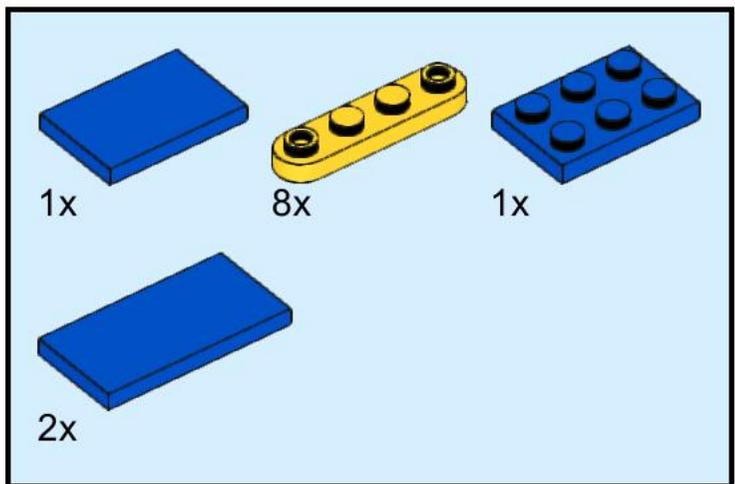

The bottom rests on a layer of three tiles and a plate to support it - only one plate can be used here due to the bottom being off centre.

A long plate goes above this layer to ensure it is held in place and another circular plate goes atop this. Hopefully this will give a solid base suspended at two levels.

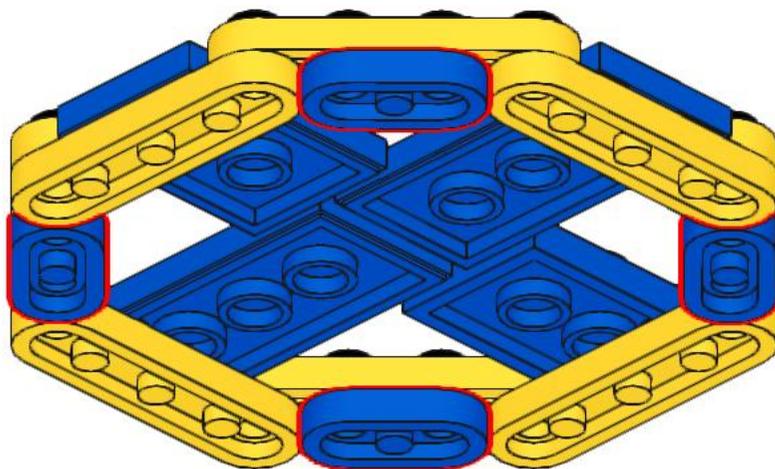

This section is purely to explain some design decisions - hopefully following instructions will clarify.

The 1x4 plate (curved at ends) is integral to this design. Sadly it is only available in six colours and this limits the colour options. Hopefully you will still be able to find a result you enjoy.
